A GREENER, BRIGHTER WEST CROYDON

We're proposing improvements to Malcolm Street, Euston Terrace and Phillip Street to create greener, safer and more welcoming streets.

The proposed works include tree planting and greening, renewed footpaths, road resurfacing and pram ramps, kerbs, informed by community feedback and planned road renewals.

Design and consultation will take place in 2026/27, with works planned for 2027/28, subject to budget approval.

Explore the proposed improvements and have your say by Friday 18 December 2026.

MALCOLM STREET

More trees and shade

We've heard from residents who'd like to see more greenery along Malcolm Street.

With narrow verges limiting tree planting in the past, we're proposing a new approach: planting trees within the roadway on one side of the street and along the verges on the other.

Trees within the roadway will be protected by raised kerbs.

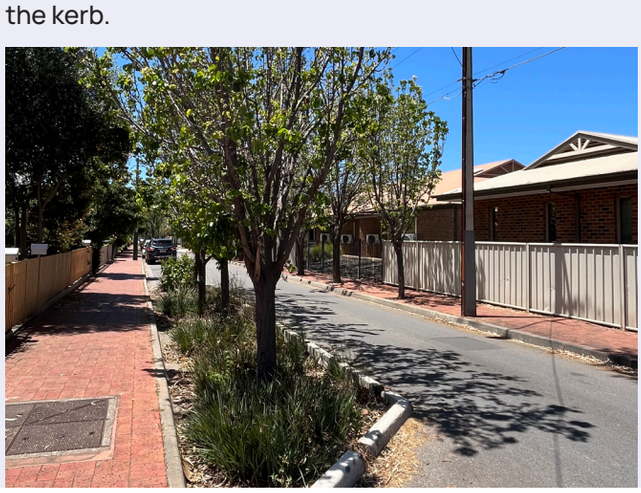
Road and intersection improvements

We're also proposing kerb extensions at the intersections with Phillip, Amy and Blandford streets to improve pedestrian safety.

Renewed footpaths

Footpaths on both sides of Malcolm Street will be renewed with clay brick pavers, extending from property boundaries to the kerb.

Existing grass strips will be replaced, with those between Phillip and Amy streets relocated closer to the kerb.



EUSTON TERRACE

Improved pedestrian crossing

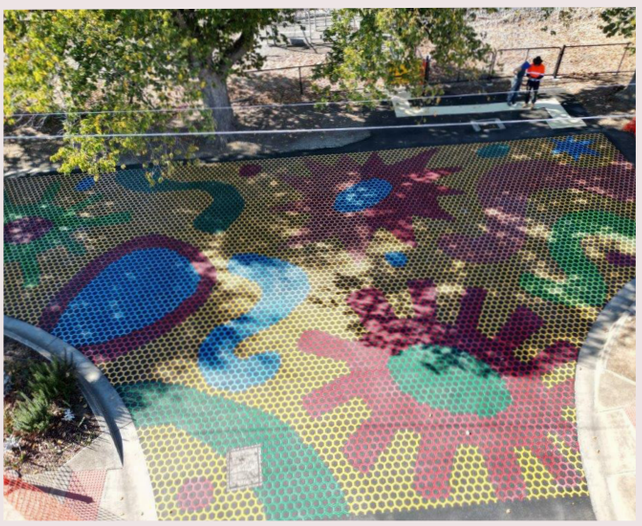
We're proposing improvements to the crossing point at Malcolm Street and Euston Terrace to make it easier for people to access the railway crossing.

Existing kerb ramps will also be renewed and improved where possible.

A splash of colour

A vibrant new road artwork is proposed at the intersection of Malcolm Street and Euston Terrace.

Similar to the artwork at Garnet Street and Euston Terrace, it would use DuraTherm material to add colour and as a safety awareness initiative.



PHILLIP STREET

Road and footpath renewal

The section of Phillip Street between Malcolm and Garnet streets is due for resurfacing.

Footpaths on both sides will also be renewed with clay brick pavers, providing a consistent width of 1.5 metres.

More street trees

We're proposing two new verge trees near the intersection with Malcolm Street.

Additional planting opportunities will be explored during detailed design, depending on the location and depth of underground services.

HAVE YOUR SAY

We'd love to hear what you think about the proposed improvements.
