

# TREE SPECIES VOTING RESULTS

## 2025/26 STAGE 1 STREET PLANTING PROGRAM

The tree species votes and preferred species are listed below. If there were equal votes or no votes, the Tree Canopy Project Lead was responsible for making the final decision and the reason for the selection is provided.

| Suburb                           | Street      | Species Options                        | Votes | Preferred Species                                      | *Staff Reason                                                                                                                |
|----------------------------------|-------------|----------------------------------------|-------|--------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------|
| Artarki Avenue                   | Kidman Park | Pyrus Betulaefolia 'Southworth Dancer' | 4     | <a href="#">Pyrus Betulaefolia 'Southworth Dancer'</a> |                                                                                                                              |
|                                  |             | Cupaniopsis anacardioides              | 0     |                                                        |                                                                                                                              |
| Barrpowell Road                  | Welland     | Celtis australis                       | 0     | <a href="#">Eucalyptus leucoxylon 'Rosea'</a>          | Wide verge and good opportunity to plant a large canopy tree. Close to RTLP so good to plant a native tree for biodiversity. |
|                                  |             | Eucalyptus leucoxylon 'Rosea'          | 0     |                                                        |                                                                                                                              |
