

SHARE YOUR FEEDBACK: ST CLAIR OVAL 2 MAIN PITCH BOUNDARY FENCE

We're now seeking your views on a proposal to install mesh-like fencing to sections of the main pitch, as part of future development of Oval 2. A concept plan and illustrative examples of the fence to demonstrate its placement and design are enclosed.

This proposal would enable competitive football (soccer) matches, while creating a safe and structured space for continued shared community use. To achieve this purpose, the proposed fence design:

- Contains the community facility and main pitch using built elements and, where required, limited sections of 1.8m high perimeter fencing. The existing back stops (~3.6m high) will be incorporated on top of perimeter fencing at each end of the pitch to contain stray balls and create a single, seamless boundary line.
- Provides a 1m high internal pitch fence, protecting the facility and spectators from the field of play.
- Supports and encourages ongoing community access to the space, with large openings in the perimeter fence created by retractable, sliding fence panels that will remain open outside of structured sport and official matches. Pedestrian gates will also provide access if sport is in play.

- Meets Football South Australia competition standards and complements the updated community facility design and functionality.
- Leaves the remainder of Oval 2 open and available for sport and community use (outside of school hours).
- Will use an unobtrusive material such as chain/mesh fencing so open space remains visible and appealing.

Share your views on the sports fence design, functionality and location of public access points by 5pm Sunday, 14 December 2025.
